

# Białków Observatory - indispensability of small ground-based telescopes in the era of satellite observations

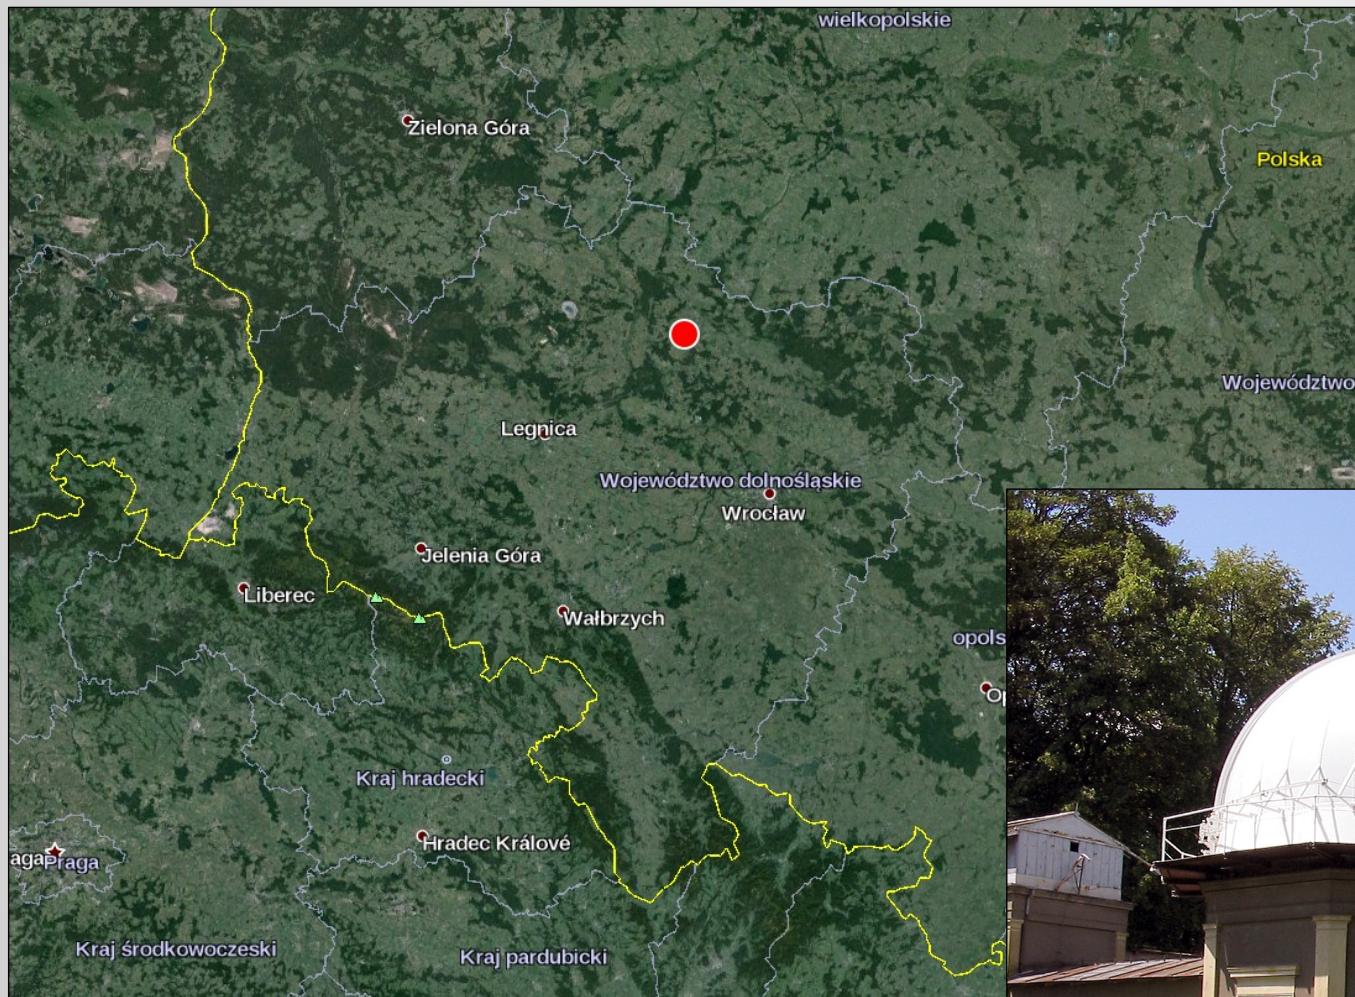

Dawid Moździerski

*Astronomical Institute, University of Wrocław, Kopernika 11, 51-622 Wrocław, Poland*

Warszawa, 08.12.2017

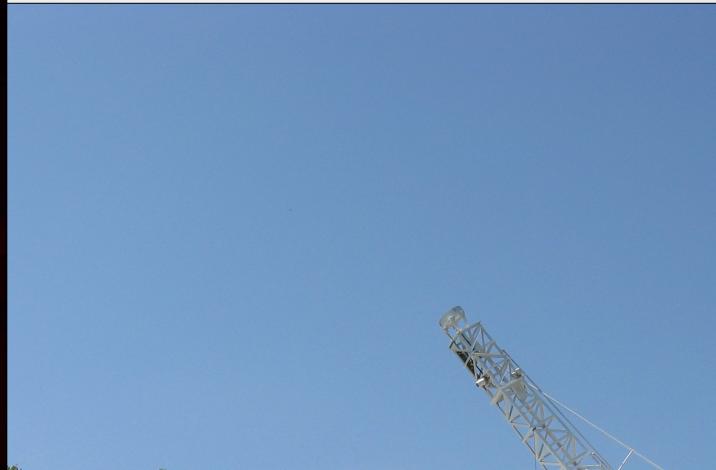

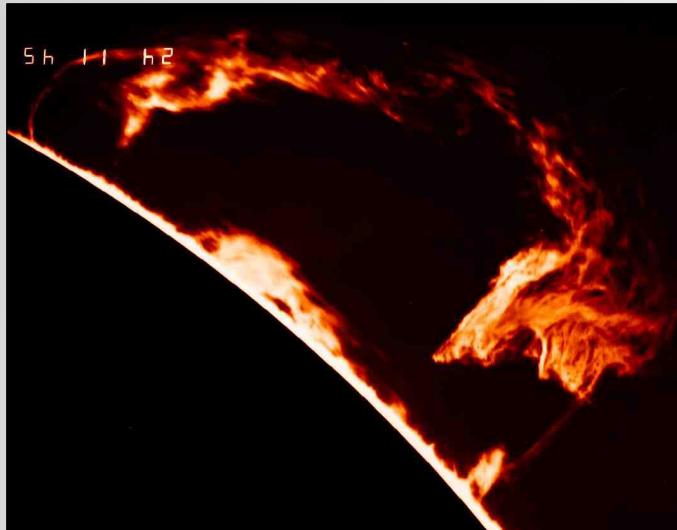

# Białków Observatory - location

Altitude ~150m

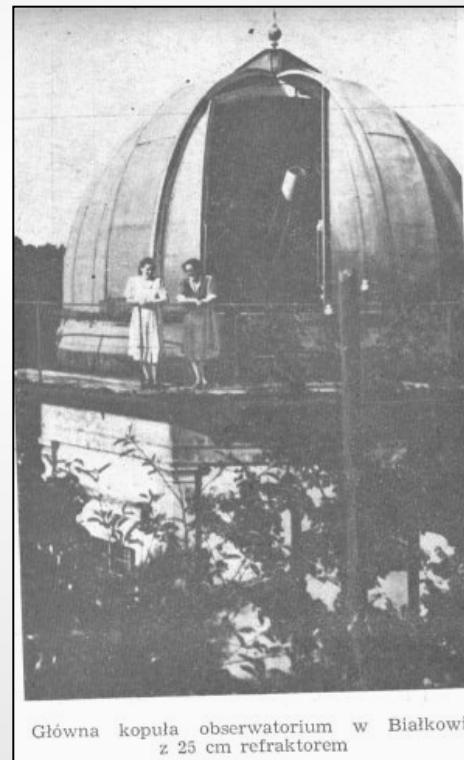

# Białków Observatory – astrophysics and heliophysics

Coronograph with 53-cm lens.

# A bit of history...

- The observatory was established by Leo von Wutschichowski in the 80's of XIX century.
- After his death in 1927, the observatory was given to Wrocław University.
- The old, 25-cm refractor, was replaced by the 60-cm Cassegrain telescope in 1976.

# Some parameters

- Telescope:
  - 60-cm Zeiss Cassegrain,
  - focal length: 750 cm,
  - image scale: 27.5"/mm.
- CCD camera:
  - back-illuminated ANDOR iKon-L DW432-BV,
  - ccd size: 1250 x 1152 pix, pixel size: 22.5  $\mu\text{m}$ ,
  - field of view: 12.89' x 11.88', image scale: 0.619"/pix.
- Filters:
  - $BV(RI)_C$  Johnson-Kron-Cousins,
  - H $\alpha$  filters: narrow 3-nm FWHM and wide 40-nm FWHM.
- Weather conditions: seeing  $\sim 2.5''$ , about 1200 observing nights in the years 2005 – 2017 (biased by the amount of observers):  $\sim 92$  nights/year.
- Automated calibration and half-automated profile and aperture photometry and astrometry (CCDPhot).

# Białykow astrophysics

Two main observing programs:

- From 1992 - searching for hot, pulsating variable stars in young open clusters.
- From 1997 - searching for variable stars in globular clusters.
- + Kepler, Gaia alerts, and other follow-ups.

# NGC 6910 campaign

- Kołaczkowski et al. (2004): 4 β Cep in NGC 6910.

## **A CCD Search for Variable Stars of Spectral Type B in the Northern Hemisphere Open Clusters. VI. NGC 6910**

by

Z. Kołaczkowski, A. Pigulski, G. Kopacki and G. Michalska

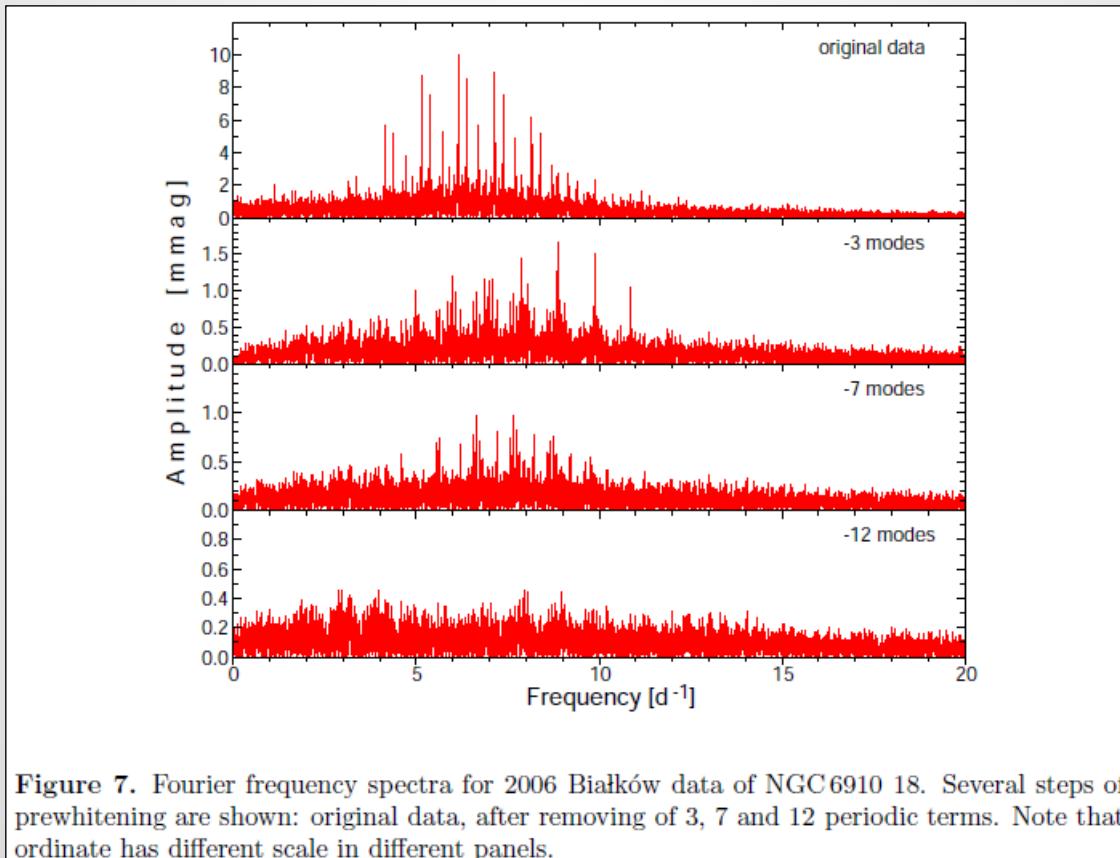

Wrocław University Observatory, ul. Kopernika 11, 51-622 Wrocław, Poland

e-mail: (kolaczkowski,pigulski,kopacki,michalska)@astro.uni.wroc.pl

*Received February 27, 2004*

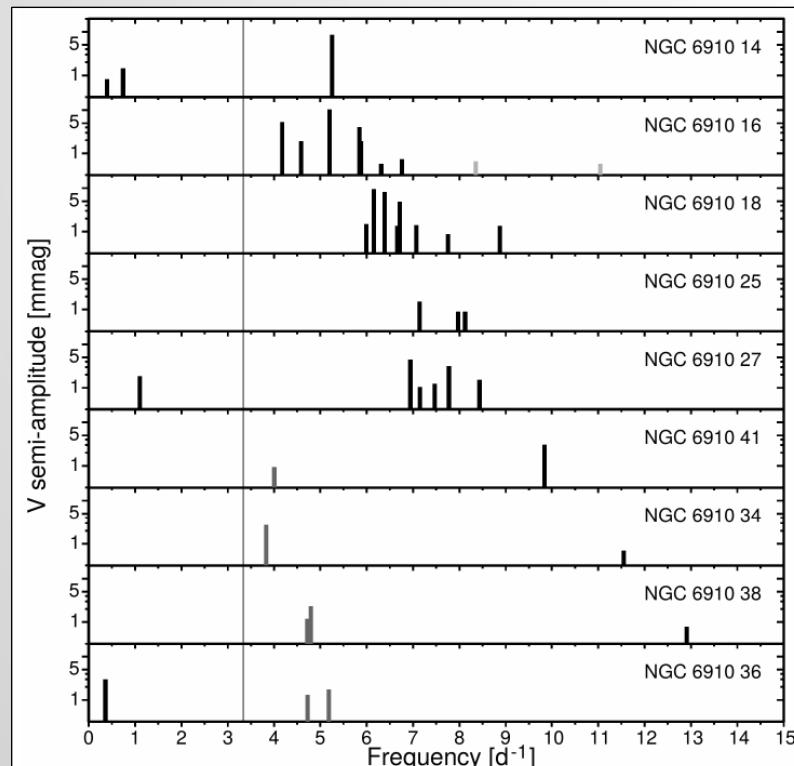

# NGC 6910 campaign

- In the years 2005 – 2007 and 2013.
- The most usable photometric data: Białków and Xinglong (China) observatories (157 nights).

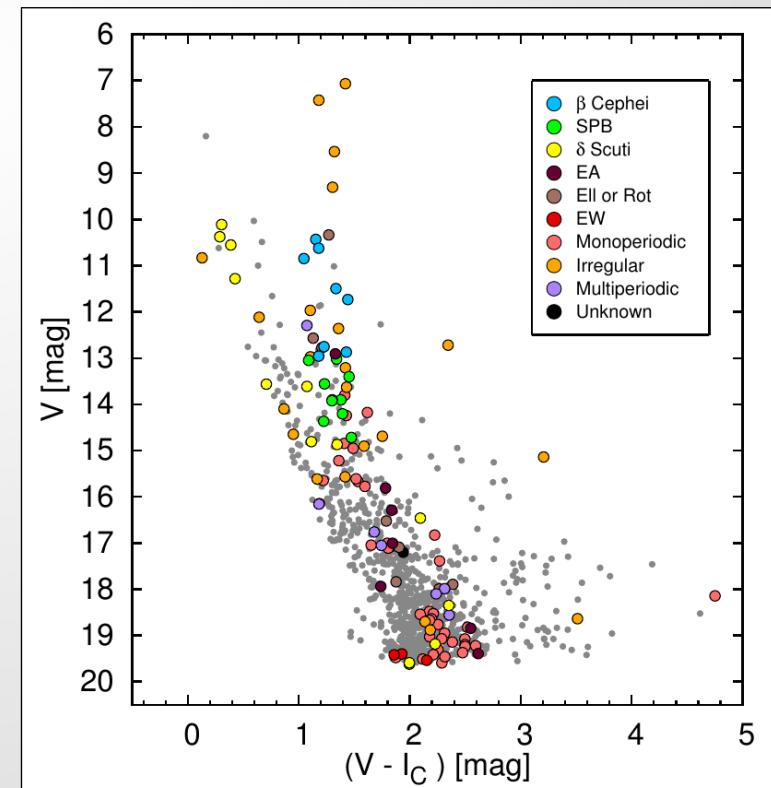

# NGC 6910 campaign

- In the years 2005 – 2007 and 2013.
- The most usable photometric data: Białków and Xinglong (China) observatories (157 nights).
- 8  $\beta$  Cep-type stars, 125 variable stars (117 new) in total.

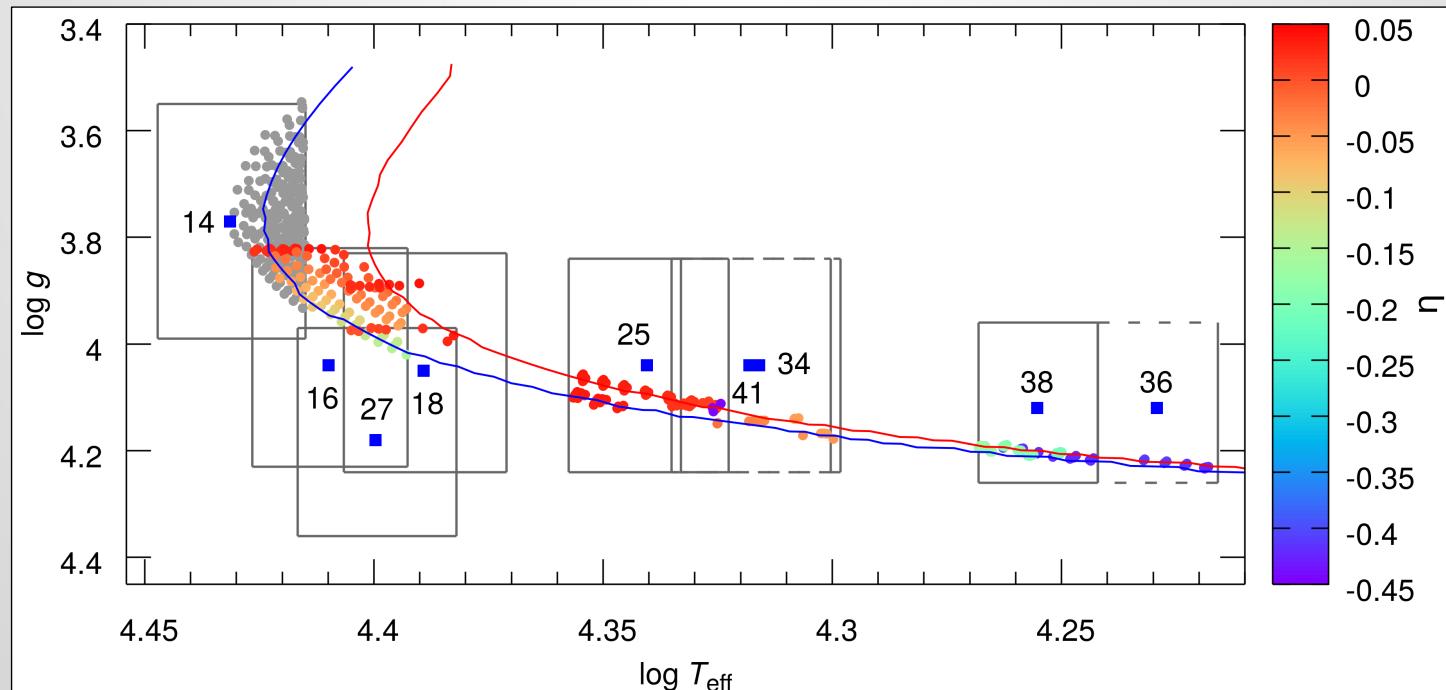

Saesens et al., 2010, AN 331, 1080

Moździerski et al. (in prep.)

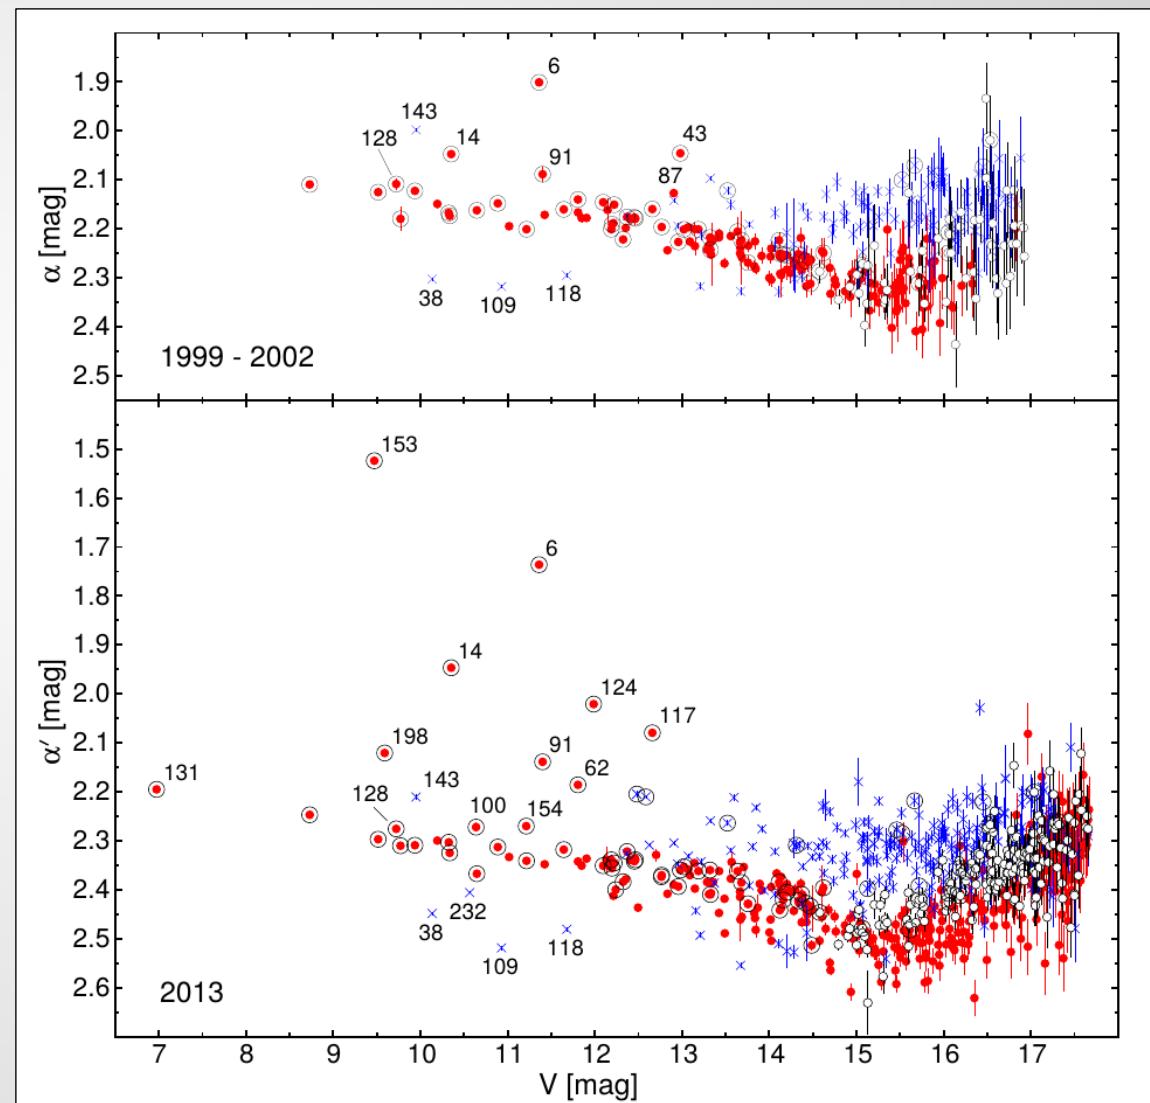

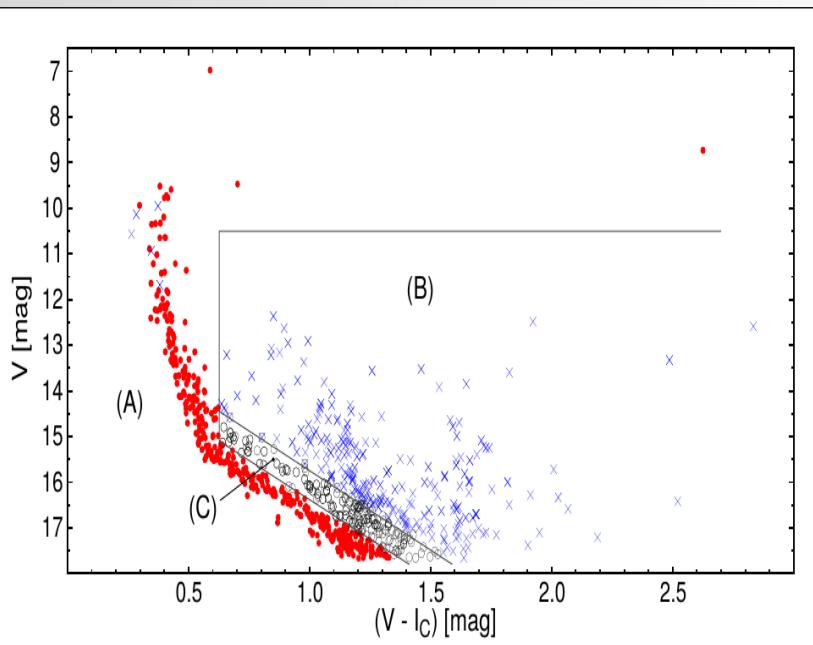

# NGC 6910 campaign

- Additionally we determined atmospheric parameters and we got time series of variability of spectral lines profiles in order to carry out so called ensemble asteroseismology of B-type pulsating stars in NGC 6910:
  - APO – Apache Point Observatory (USA), tel. 3,5 m, echelle 3200 Å – 10 000 Å, R = 31500.
  - OHP – Haute-Provence Observatory (Francja), tel. 1,93 m, echelle 3872 Å - 6943 Å, R = 75000.
  - NOT – Nordic Optical Telescope (Wyspy Kanaryjskie), tel. 2,56 m, echelle 3700 Å - 7300 Å, R = 46000.

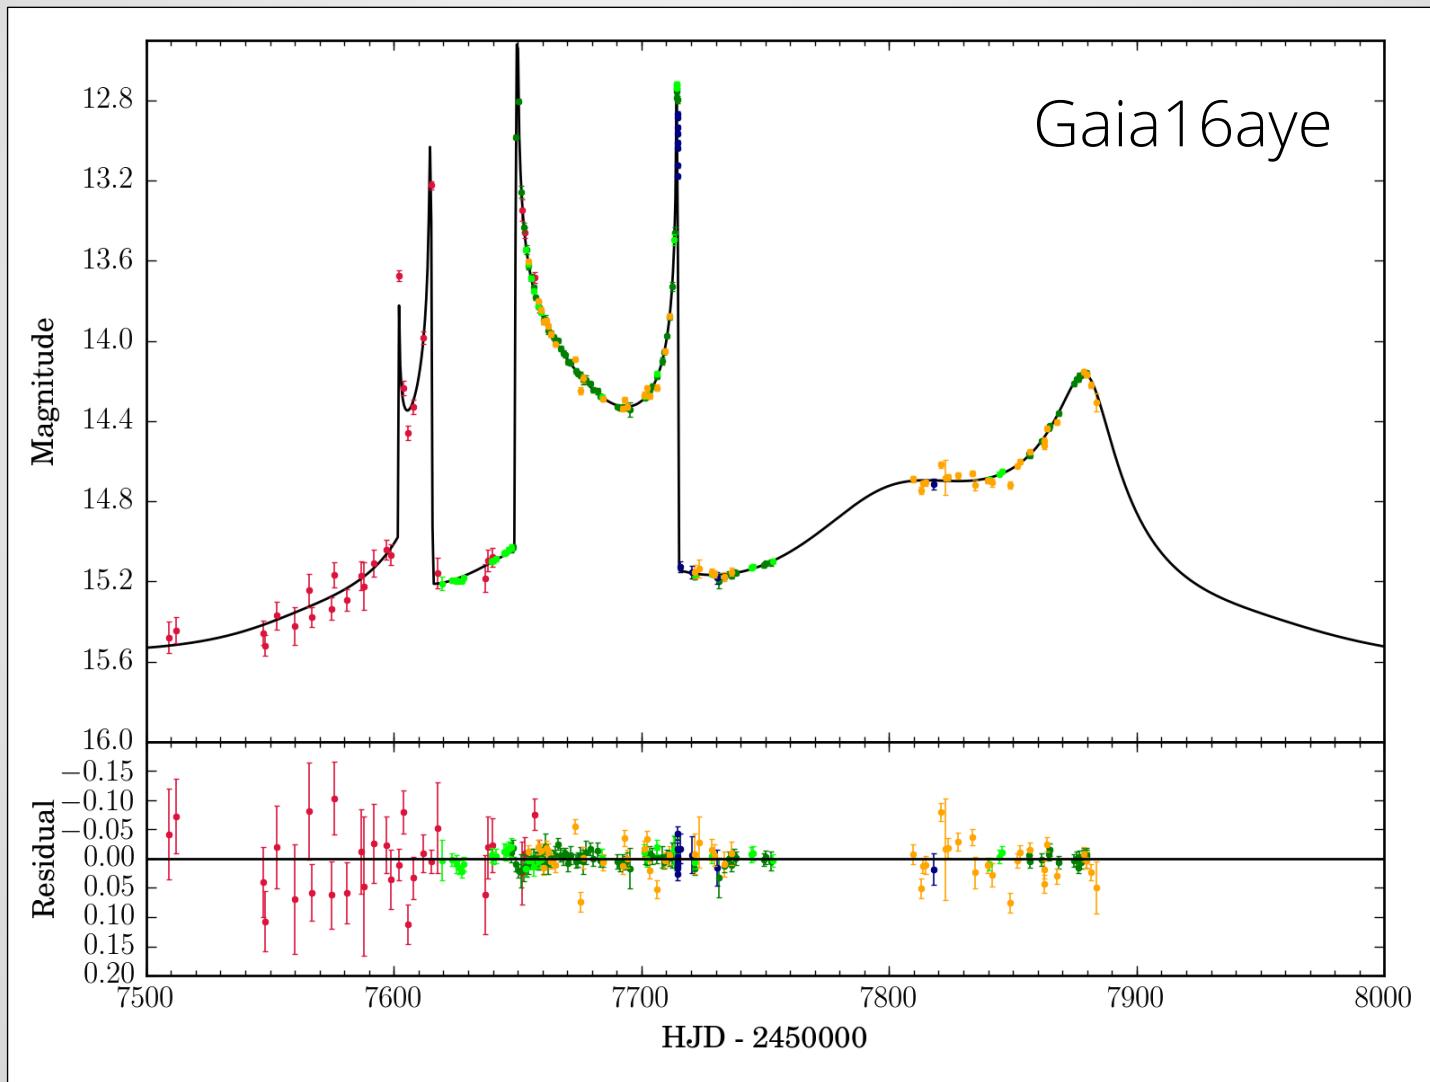

# Ha photometry – e.g. NGC 457

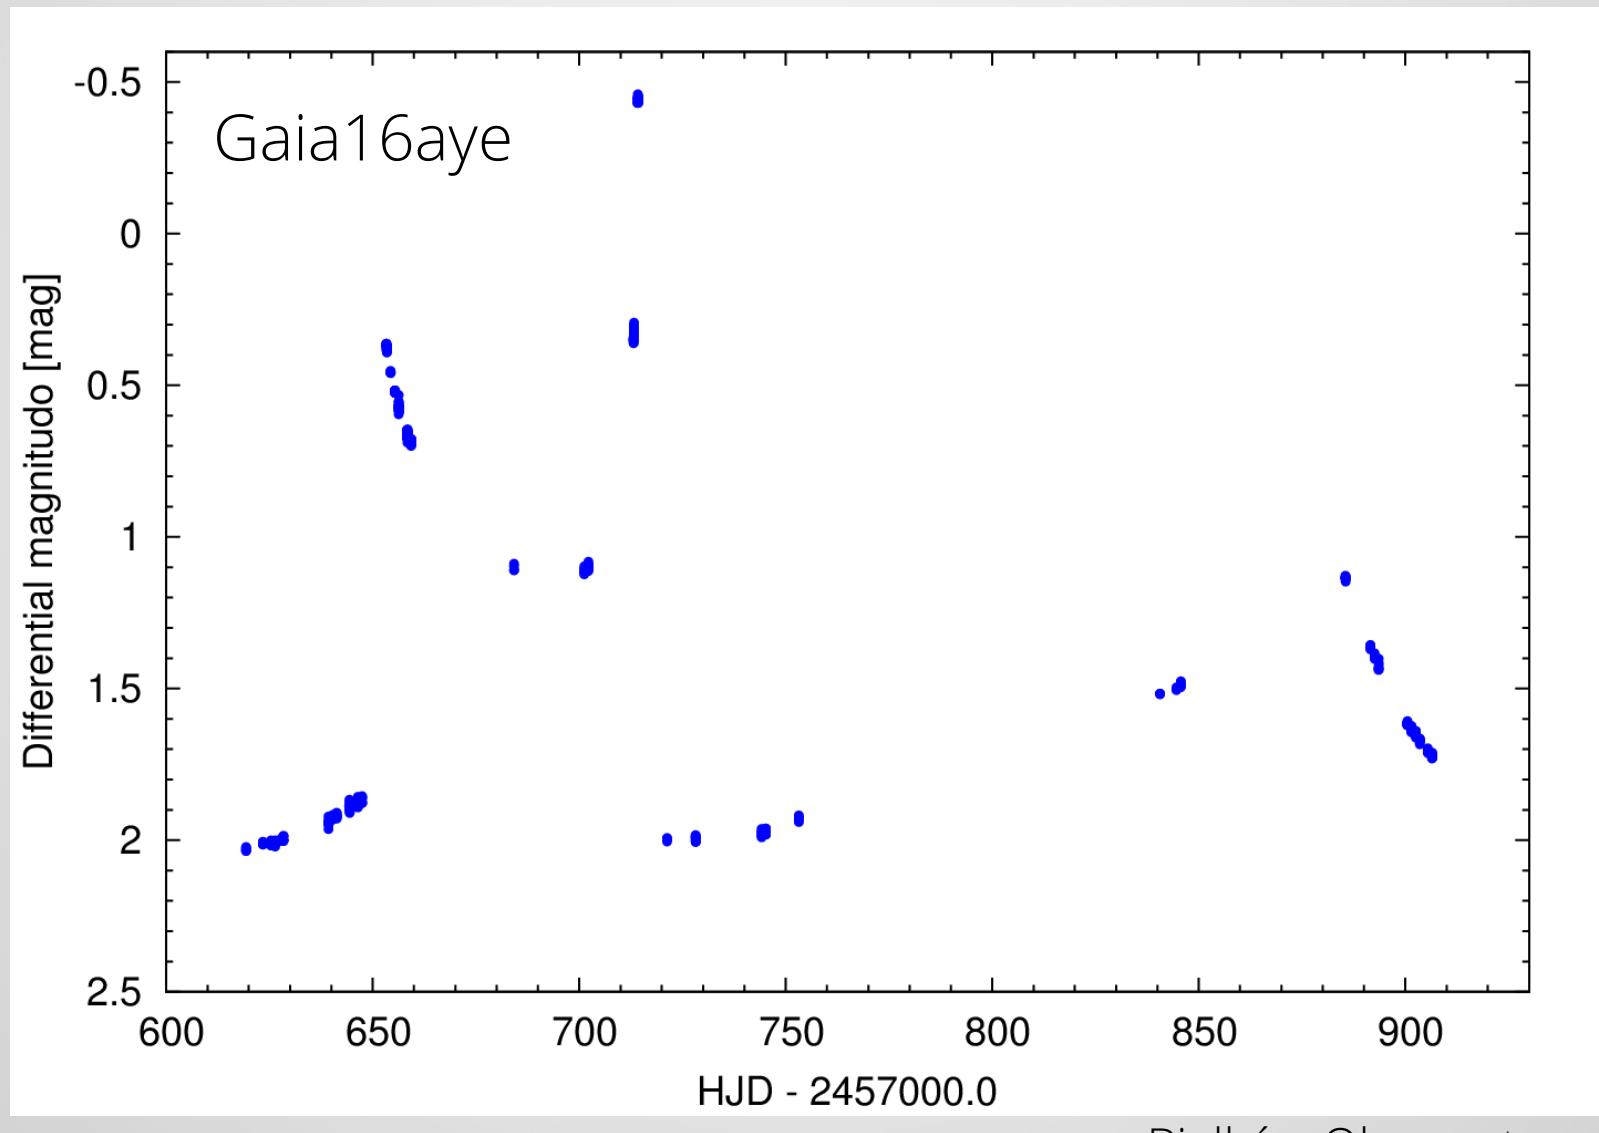

- A – NGC 457 members
- B – field stars
- C – double-star sequence of cluster stars

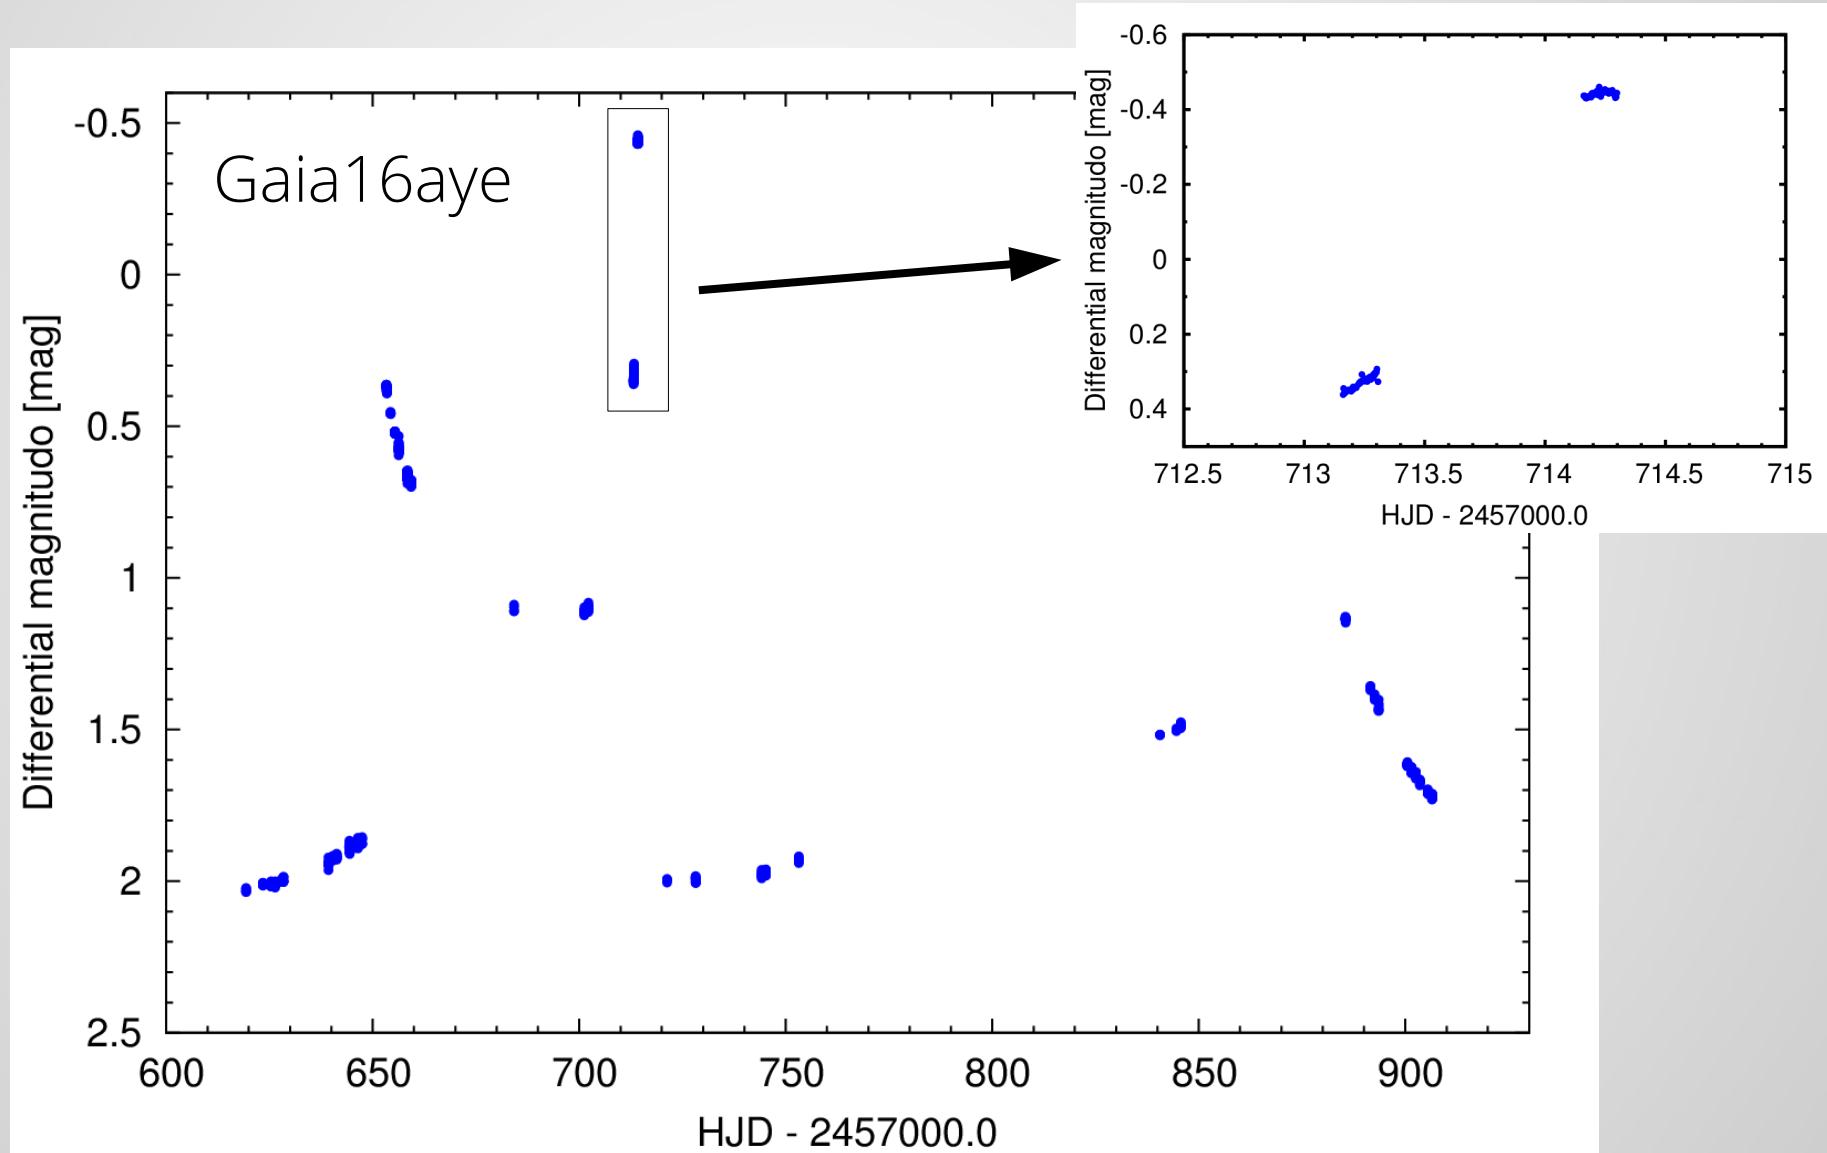

# Gaia alerts follow-up

# Gaia alerts follow-up

# Gaia alerts follow-up

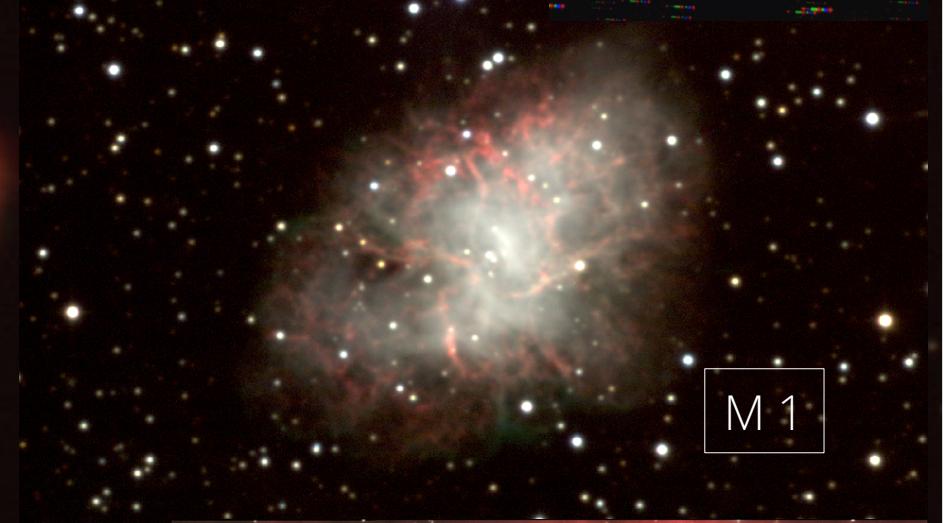

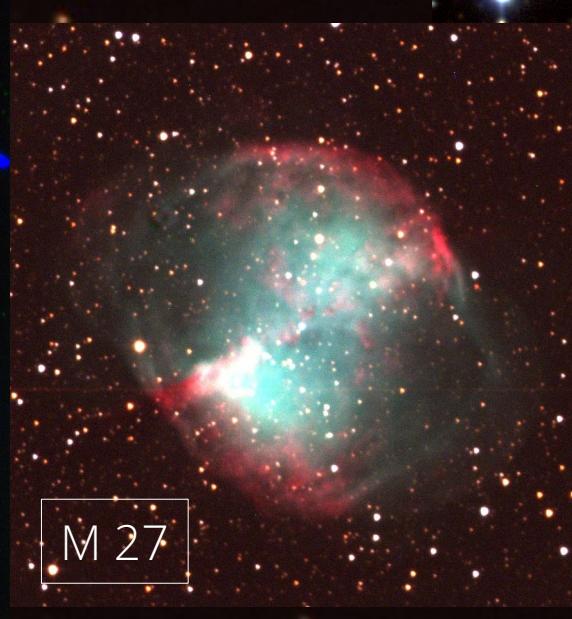

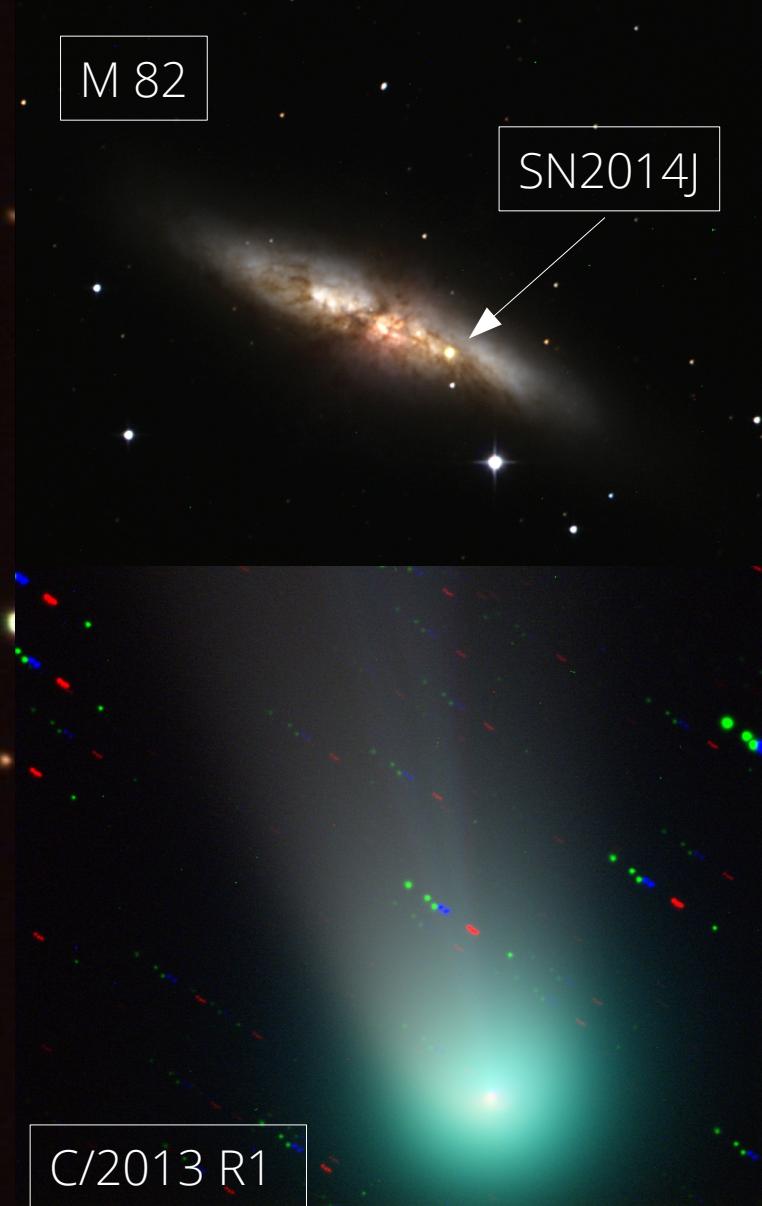

# Large Białków Observatory photometry archive

- About 700 objects.
