

Software tools to enhance alert-based science

The TOM Toolkit

Presenter: R.A. Street,
David Collom, Lindy Lindstrom, Curtis McCully, Mark Bowman, Austin Riba
Las Cumbres Observatory

Deriving Science from Survey Streams

- Extremely large target lists
- May or may not be known in advance
- Rapid alerts open up new science
- Rapidly changing priorities
- Large-scale follow-up for confirmation/characterization
- Large datasets
- Rapid feedback & re-evaluation

Deriving Science from Survey Streams

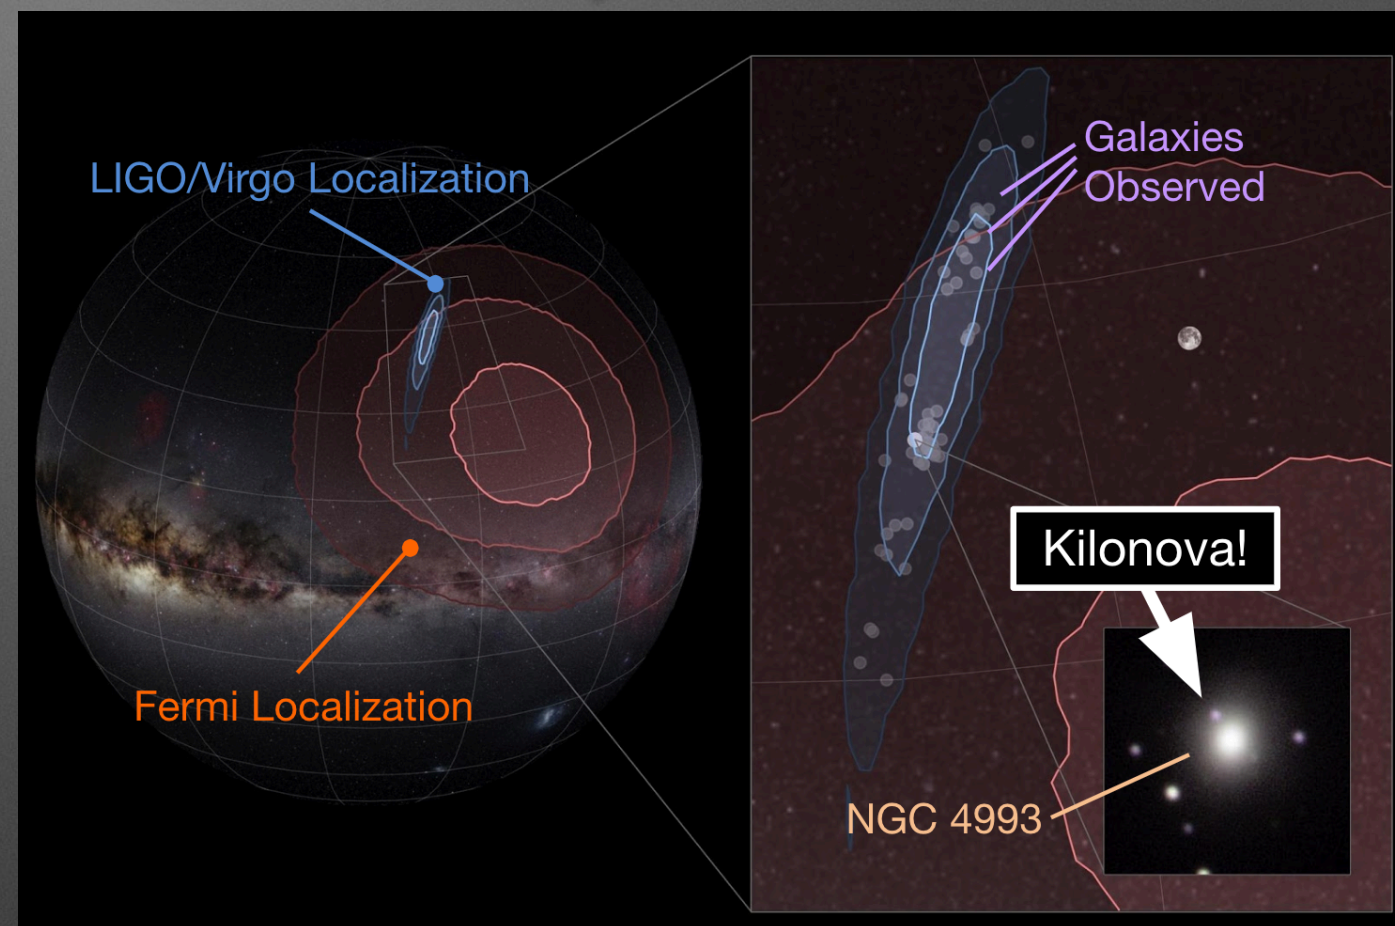

- Continuous stream of new targets
- Real-time target selection and prioritization
- Handle many targets in different states simultaneously
- Observe on a range of timescales, cadences

Deriving Science from Survey Streams

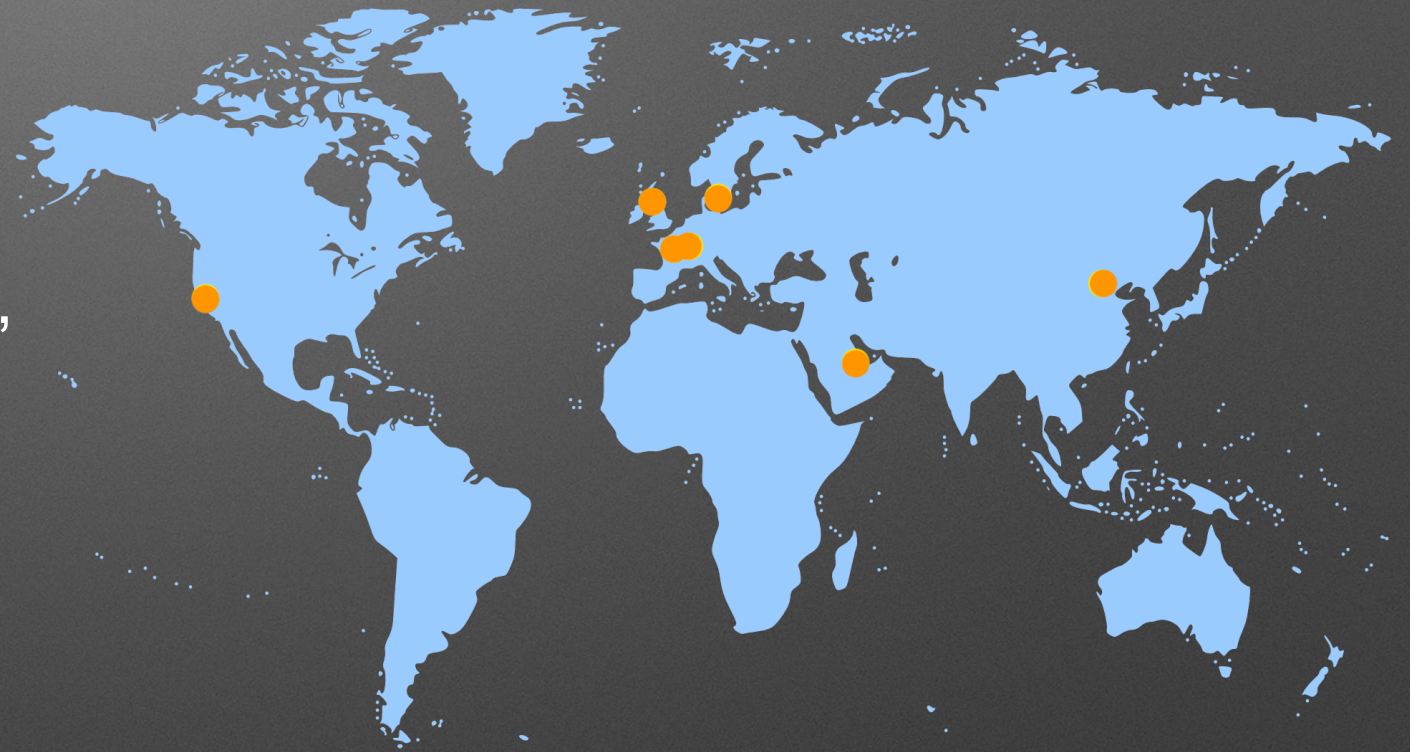

- Continuous stream of new targets
- Real-time target selection and prioritization
- Handle many targets in different states simultaneously
- Observe on a range of timescales, cadences
- Coordinate observations across a range of facilities
- Manage thousands of observations, TB of data

GW170817, Abbott et al. 2017

Deriving Science from Survey Streams

- Continuous stream of new targets
- Real-time target selection and prioritization
- Handle many targets in different states simultaneously
- Observe on a range of timescales, cadences
- Coordinate observations across a range of facilities
- Manage thousands of observations, TB of data
- Accessible to project members worldwide

Target and Observation Manager Systems

Database-driven software to manage the targets, observations and data products from an astronomical project

Challenges of developing a TOM

- Areas of common functionality
- Different science have different requirements
- Even adapting existing code requires extensive investment of time and effort and hence cost
- Advanced database/ software engineering skills not available to most astronomers

- Build an open-source, professionally developed, software package that will enable astronomers to build TOM systems easily and customize them for their science goals
 - Python-based
 - Minimal prior knowledge required
- Provide large set of core functions for commonly-used components
- Provide well-defined interfaces to allow science-specific code to interact with the TOM
- Create a community of TOM users who can support each other and develop plugins
- TOM Toolkit public Slack channel - to join, go to: <https://tom-toolkit-invite.lco.global/>
